

Accelerate Business Transformation with FlashStack

FlashStack combines Cisco network, compute and management with Pure Storage to help **reduce upfront costs and reduce opex.**

FlashStack is a converged infrastructure solution from Cisco and Pure Storage that brings the power and efficiency of all-flash storage to your entire data centre. Ensuring maximum performance and reliability for business-critical applications, DevOps, and analytics.

With industry-leading components from Cisco and Pure Storage, FlashStack is a powerful and resilient converged infrastructure solution that will dramatically shorten your time to value. It scales without disruption as your business grows, and provides all-flash speed and reliability for every workload.

What FlashStack gives you

Enhanced Efficiency

FlashStack is easy to purchase, install and operate. Deploy on-demand and keep costs low.

Empowered Workloads

Build your private cloud with always-on power to support critical workloads.

Always Evergreen

Scale and grow, install once and upgrade indefinitely without disruption.

Why choose FlashStack?

10

Times faster access to data

99.9999%

Secure and stable availability

10

Times more user productivity

48%

Lower TCO over 5 years

A tailored, turnkey solution with various delivery models

Plug and Play

FlashStack can be delivered pre-built, so the infrastructure can be online in hours, not weeks.

Custom Build

No more rigid configurations, FlashStack can be built as needed for your needs.

Budget Friendly

Protect investment by leveraging components already purchased – such as existing UCS, Nexus, FlashArray or FlashBlade.

Possible together.
