

# Rapid 7 simplify your security

A recent study conducted by Forrester Consulting, customer interviews and data aggregation showed the following three-year impact of adopting Rapid7's leading vulnerability risk management offering.

## InsightVM by Rapid7 and Natilik will enable you to...

### Before InsightVM

- Lack of granularity
- Lack of vulnerability context
- Limited awareness of off-network assets

### Improved visibility

### After InsightVM

- **22%** reduction of false positives
- **10-15%** time saved implementing
- InsightVM earlier in the development lifecycle
- Organisation-specific risk scoring

### Before InsightVM

- High quantity of vulnerabilities on every network
- No remediation guidance
- Time-consuming triage

### Increased efficiency

### After InsightVM

- **33%** reduction in manual effort to investigate and remediate vulnerabilities
- **33%** faster remediation from contextualised remediation guidance
- **60%** decrease in patching efforts

### Before InsightVM

- Burdensome
- Manual process
- Lacks specificity to each

### Simplified reporting

### After InsightVM

- **40-50%** time saved on reporting activities
- Easier report creation, without loss of fidelity
- Customisable reporting for every stakeholder

### Before InsightVM

- Siloed teams
- Disparate tools
- Operational drag

### Greater flexibility

### After InsightVM

- Augmentation of SOC with Managed Detection and Response
- One agent for multiple solutions Connectivity via RESTful API
