

Cisco Catalyst x Meraki Dashboard: Empowering IT teams with the simplicity of cloud-monitoring

Managing networks isn't easy, and with cloud services adoption driving modern network architectures - the complexity is only growing.

Helping you keep up with these demands is the Meraki cloud-based dashboard, from which you can now monitor your Catalyst 9000 Series switches and WLCs in real-time from a single interface.

The benefit of cloud-monitoring for Catalyst

Cloud monitoring allows you to improve visibility, gain operational efficiency and enable scalability without complicating your operations. Explore the compelling capabilities cloud monitoring provides, helping you manage your network better.

View network topology

On the 'Network-wide' tab, check out Monitor > Topology to see the map of all your connected devices.

Monitor device status

See the status of every network device alongside any critical alerts, all in a single view.

Manage software image upgrades

Easily schedule your Catalyst IOS-XE software upgrades, all through the simple Dashboard UI.

Inspect port details

Click on any Catalyst switch and see information about real-time port status, stacks, and config.

Track clients and traffic

Speaking of traffic, get detailed telemetry on every client connected to your network.

Easy Troubleshooting

All your traditional tools are available from the cloud: CLI, packet-capture and ping from anywhere.

Client application visibility

See any applications running on the network and track down the owner - fast.

Event and change monitoring

Easily view and compare configuration versions and filter network-wide event logging.

Wireless monitoring

Provide unified visibility into Meraki and Cisco wireless from one dashboard.

Experience the simplicity and freedom of working from anywhere using cloud monitoring for Cisco Catalyst switches on the Cisco Meraki dashboard.

Who will this help?

Mixed environment users – bringing your Catalyst switches and wireless controllers and access points into the same view as your Meraki devices makes it easier for you to monitor the entire network environment.

For those who are cloud curious – this is an excellent opportunity to learn the cloud dashboard and get ready for what's next as your network grows and becomes less centralised.

Natilik can show how easy it is to onboard your Catalyst devices for cloud monitoring in less than two minutes!
